

### **Challenges**

- Implementing a simple MVC framework with Java and JSPs
- Creating the data model in MySQL
- Staying connected to class during semester
- Staying motivated

### **Lessons Learned**

- Do NOT procrastinate
- Prioritize class work during free time (during work lunches, after work, on weekends)
- Start early on implementations to remove blockers
- Keep up with lectures to stay connected to class/remove blockers/learn new approaches, etc.
- I should never assume my own knowledge is ideal, and I should strive to learn more everyday
